Class Border

```
java.lang.Object
  modele.Occupant
    modele.Border
```

All Implemented Interfaces:

[Questionable](#)

```
public class Border
  extends Occupant
```

A Border is an Occupant that can be found all around the grid. It makes the Character bounce when it hits it.

Constructor Summary

Constructors

Constructor	Description
Border (Position position)	Creates a new Border at the given Position.

Method Summary

All Methods	Instance Methods	Concrete Methods
-------------	------------------	------------------

Modifier and Type	Method	Description
void	process (Character m)	Makes the given Character bounce when it hits the Border.
java.lang.String	toString ()	Get the String representation of a Border.

Constructor Detail

Border

```
public Border(Position position)
```

Creates a new Border at the given Position.

Parameters:

position - The Position of the new Border.

Method Detail

process

```
public void process(Character m)
```

Makes the given Character bounce when it hits the Border. if the Character is going in a diagonal direction, it will bounce in the opposite diagonal direction. that direction is determined by a logical formula to avoid the repetition of code.

Specified by:

`process` in interface `Questionable`

Specified by:

`process` in class `Occupant`

Parameters:

m - The Character that hits the Border.
